

Modul Pembelajaran Terintegrasi:

The World of Water: A Scientific and Linguistic Exploration

I. Informasi Umum Modul

Komponen	Deskripsi
Mata Pelajaran	Sains (Fisika/Kimia Dasar) & Bahasa Inggris
Topik Utama	Sifat dan Siklus Air (<i>Properties and Cycle of Water</i>)
Level/Jenjang	Sekolah Menengah (SMP/SMA)
Alokasi Waktu	2 x 45 Menit (atau disesuaikan)

II. Tujuan Pembelajaran (Learning Objectives)

Setelah menyelesaikan modul ini, peserta didik diharapkan mampu:

Tujuan Sains (Science Objectives):

- Menjelaskan tiga wujud utama air (*three states of matter: solid, liquid, gas*).
- Mengidentifikasi dan mendeskripsikan tahapan utama dalam Siklus Air (*Water Cycle: Evaporation, Condensation, Precipitation, Collection*).
- Menjelaskan konsep titik didih dan titik beku air (*boiling point and freezing point*).

Tujuan Bahasa (Language Objectives):

- Menggunakan kosakata spesifik (terminologi sains) dalam Bahasa Inggris yang terkait dengan topik air.
- Mengaplikasikan *Simple Present Tense* untuk mendeskripsikan proses ilmiah yang berulang (seperti siklus air).
- Membuat kalimat kompleks menggunakan *connectors* (seperti '*as a result*', '*therefore*', '*which leads to*') untuk menjelaskan hubungan sebab-akibat.

III. Materi Pembelajaran (Learning Materials)

A. Konten Sains: States of Water and The Water Cycle

2. Inti (60 Menit)	Activity Title: The Water Cycle Journey	Reading, Writing, & Concept Mapping
	1. Reading Comprehension: Students read a short passage (provided in the module) about the Water Cycle.	Reading (Understanding scientific texts)
	2. Jigsaw Activity (Group Work): Divide the class into four groups. Assign each group one phase of the cycle (<i>Evaporation, Condensation, Precipitation, Collection</i>). The group must prepare a short presentation (2-3 sentences) explaining their phase using the Simple Present Tense.	Science Knowledge & Speaking (Using target grammar)
	3. Experiment: Demonstrate the concept of Condensation (e.g., placing ice cubes on a metal plate above hot water). Ask students to describe the process they observe using connectors (e.g., <i>The steam rises, therefore the cold plate causes droplets to form.</i>).	Observation & Writing (Cause and effect)
3. Penutup (15 Menit)	Activity Title: Quick Quiz & Reflection	Assessment & Summarizing
	1. Quick Quiz: Provide 5 multiple-choice questions in English assessing both science concepts and vocabulary.	Reading & Science Assessment
	2. Reflection: Ask students to write one sentence summarising the main lesson learned today, starting with: " <i>Today, I learned that...</i> "	Writing & Summarization

V. Penilaian (Assessment)

Jenis Penilaian	Deskripsi	Bobot
Penilaian Sikap	Observasi partisipasi dan kerja sama kelompok (<i>Teamwork and participation in English</i>).	20%
Penilaian Pengetahuan	Hasil dari <i>Quick Quiz</i> (Pemahaman konsep dan kosakata sains).	40%
Penilaian Keterampilan	Kualitas presentasi kelompok dan deskripsi hasil eksperimen (Penggunaan <i>Simple Present Tense</i> dan <i>Connectors</i> yang akurat).	40%
